FluxxLab

WHO IS FLUXXLAB?

FluxxLab™ is a specialty division of The Arendis Group and Arendis Labs. The Arendis Group includes Bliss Wellness, which is a premier consumer CBD brand with a diverse product line.

WHAT MAKES US EXTRAORDINARY?

It starts with the careful selection of outstanding, high quality, locally produced Colorado hemp strains. Next comes a unique extraction process, which very precisely separates and preserves the most valuable and unique cannabinoids.

After that we craft our CBDA formulations to be the most potent and effective available anywhere. We very proudly offer these finely crafted products to our customers and dealers worldwide.

Finally, we stand behind each and every product with a 100% quality and satisfaction guarantee.

OUR FOCUS ON CBDA

Often referred to as the Mother of CBD, CBDA is found in the live hemp plant, but almost always converts to CBD during harvesting and processing. Preserving CBDA, and preventing it from converting to CBD, is an art. Refining and preserving the very best cannabinoids is what we do at FluxxLab™, and nobody does it better. We are the world's experts at bringing you pure, refined CBDA.

OUR PASSION IS OUR WORK

We are passionate about our work. We have invested heavily to develop remarkable extraction and processing methods. By combining careful old-school expertise with state-of-the-art technology, we proudly produce the very best hemp based extracts in the world. FluxxLab™ CBD and CBDA is unique and second to none.

FULL SPECTRUM VS THC FREE

KNOW THE DIFFERENCE

THC-FREE

THC Free is a very popular choice. So what's the difference? And can you have THC Free without losing the valuable benefits of Full Spectrum CBDA?

THC is a naturally occurring cannabinoid in all hemp and cannabis supplements, including CBD and CBDA. While it has its benefits, some people would rather be sure that they can be completely THC Free.

With many other brands, being THC Free means that you are only getting plain CBD Isolate and nothing else. In other words, THC Free often means that you are not getting the full, natural range of other cannabinoids in your hemp supplement. At FluxxLab™ being THC Free does not mean that you have to give up any of the important beneficial

compounds in your hemp supplement. FluxxLab™ CBDA still contains the Full Spectrum of all other naturally-occurring cannabinoids, including CBD and terpenes — only the THC is removed.

FULL SPECTRUM

The term Full Spectrum generally refers to a formulation that includes THC. Most suppliers do not have the ability to remove THC without reducing the end product to a plain CBD Isolate. Using plain CBD Isolate means that you have eliminated all of the other beneficial cannabinoids. You do not need to reduce your supplement to plain isolate in order to be THC Free.

At FluxxLab™ you not only get the full spectrum of naturally-occurring cannabinoids, we also frequently supplement your CBDA with CBD and additional hemp terpenes. FluxxLab™ CBDA is not only THC Free, it is the richest and best CBD supplement you will find anywhere.

CBDA

WHAT IS CBDA?

CBDA works differently than plain CBD. Often referred to as the “Mother of CBD,” CBDA needs to be carefully preserved or it will naturally convert to CBD. Preventing CBDA from converting to CBD requires a very delicate process. People who take their daily dose of CBDA usually find that they are less stressed, sleep better, and have less aches and pains. FluxxLab™ CBDA also contains a measured dose of CBD. The two work together to deliver a more complete and more potent overall effect than plain CBD. From cancer treatment to neuropathy many people believe that the body’s responses to these cannabinoids often seem miraculous. However, the most persuasive reason to use FluxxLab’s™ CBDA formulation is for general health and wellness. The body’s

Endocannabinoid System is constantly in need and is not always getting its proper stimulation from normal diet and exercise. Because our CBDA formulation is the “perfect” and “live” precursor to CBD, it is the ideal choice for daily stimulation and overall health. Compared to all other cannabinoids, FluxxLab’s™ CBDA formulation is the best all-around first choice. Refining and preserving the very best cannabinoids is what we do at FluxxLab™, and nobody does it better. We are the world’s experts at bringing you the very best cannabinoid formulations.

CBDA VS CBD

CBDA and CBD work in very different ways, and some of the benefits are overlapping. Other benefits are widely distinctive to only CBD or CBDA. By combining the two, the benefits are many times more potent than CBD alone. At FluxxLab™ our CBDA contains about 10% naturally-occurring CBD. When combined the two offer a very powerful alternative to plain CBD by itself. If you are looking for the most complete CBD/CBDA experience, FluxxLab™ offers the perfect balance and the highest quality that you will find anywhere.
